NEWS SENTIMENT ANALYTIC

Stay informed.
Keep your peace.

News curation for the mental health of the Indonesian public, powered by Gemma.

NLP · Gemma 4 | 12 Indonesian news portals | [Team name]

THE PROBLEM

Bad news travels fast, and it follows us into our feeds

41%

of the first 100 articles Gemma analysed from our 7-day sample were **negative**. Only 29% were positive.

Doomscrolling

Endless feeds keep us scrolling through crime, disasters and conflict.

No way to choose

Portals sort by recency and clicks, never by emotional impact.

Stress or silence

People either absorb the stress or tune out of the news entirely.

Source: project dataset, 3,647 articles from 12 Indonesian portals, 24–31 Oct 2026; 100 analysed by Gemma 4

OUR SOLUTION

Filter the news by how it will make you feel

Collect

Local news from 12 Indonesian portals, sorted into one shared set of 13 categories.

Understand

Gemma reads each article and labels it positive, neutral or negative, with a score and a reason.

Choose

A dashboard to see the mood of each topic and pick what to read, on your terms.

HOW IT WORKS

From headline to mood in four steps

01

Scrape

Hourly crawler for Kompas, detik, CNN Indonesia and 9 more, checking robots.txt first

02

Clean & sort

Strip ads and “Baca juga” links, drop duplicates, map 470 portal sections to 13 categories

03

Analyse

Gemma 4 labels articles in batches of 10, each article once, results cached

04

Explore

Next.js dashboard: mood by category, source and time, with every article’s reason

Stack: **Bun + Hono** API · **Gemma 4** (gemma-4-26b-a4b-it) via the Gemini API · **Next.js + Mantine** frontend

GEMMA AT WORK

Same race, two stories: Gemma reads the framing

detikcom · Balap

“Sprint Race MotoGP Malaysia 2026: Acosta Juaranya, Marquez Kedua”

POSITIVE · score +0.6

“Reports successful race results and podium finishes for athletes.”

CNN Indonesia · Balap

“Hasil Sprint Race MotoGP Malaysia: Alex Marquez Crash, Acosta Juara”

NEGATIVE · score −0.4

“Reports a crash involving Alex Marquez during the race.”

Each article gets a **label**, a **score** from −1 to +1 and a one-line **reason**, so readers can see why it was flagged.

Model: gemma-4-26b-a4b-it via the Gemini API · temperature 0 · title, summary and first 700 characters per article

BY THE NUMBERS

One week of Indonesian news, in one place

12

news portals, from Kompas and detik to IDN Times and kumparan

3,647

articles in the 7-day demo dataset

470

portal sections mapped onto 13 shared categories

1×

each article is analysed once, then cached

Source: project db-sample backup, 31 Oct 2026

BUILT RESPONSIBLY

Respectful to publishers, transparent to readers

robots.txt first

Checked on every run; disallowed portals and pages are skipped.

Polite crawling

Requests to a site at least 1.5 s apart; stops when a site pushes back.

Traffic goes back to the source

Every card links to the full article on the original portal.

Explainable labels

Gemma gives a reason for each label, so readers can judge it.
